With AutoCAD 2023's new markup assist feature you can import and edit markup symbols directly on drawings. You can add or remove parts, change dimensions, move elements, and other edits to your drawings, without requiring additional drawing steps. The markups assist feature requires that your drawing have visibility to the design surface so that the user can see and work with the symbols. The markups assist feature does not work for symbols that are copied to the command line or via the Clipboard. Although the markups assist feature does not currently support multiple levels of the markup hierarchy, you can still import multiple markups for a single symbol using the Import Multiple Markups dialog. There are two main ways to import markup data: Send the data in a format that the AutoCAD markups assist feature can interpret. The data can be a clip file (created using Export as Clipboard), a TXT file, or a PDF file. Send the data as a single exported drawing (Export Drawing). *The file format is not supported by Excel or Powerpoint. Raster Style: You can now use the powerful and versatile raster style technology to give AutoCAD drawings a professional look. Add simple geometric shapes, images, and pattern fills to drawings using the raster style technology. The raster style technology automatically applies raster effects to many commands, including the 3D modeling and text commands. The raster style technology creates what looks like a high-resolution photo of your drawing. The raster style can include any number of different geometric shapes, including 3D shapes such as spheres, cylinders, and cones. It can also apply 3D effects such as spotlights, shadows, reflections, glossy highlights, and glows. See the video: 2:36 min. Enhancements to the Appearance tab: The Appearance tab in the UI contains a tabbed view that allows you to adjust the look and feel of your drawings, without opening a separate dialog. You can use the new View control to quickly hide or display specific tabs. You can also use the new Hide button on the Ribbon to quickly hide and show the tab. You can now change the default drawing page from the location where you open your drawings to any page within your drawing. You can also display or hide tabs within the Appearance tab depending on the drawing page that you are viewing. Import and Export: You can
