The AutoCAD program is a professional-grade CAD application, requiring experience and expertise in computer programming and graphic design. AutoCAD is intended for use by CAD professionals such as architects, civil engineers, mechanical engineers, and other related trade professionals. AutoCAD contains some features that are unique to the software, such as various levels of detail (LOD), texture brushes, an image processor, and integrated PDF editing. In some CAD programs, the user can create a single block with multiple features and then specify changes for each feature. AutoCAD includes the ability to create changes that apply to all features in a block, such as a change to the color or size of a number of features. AutoCAD is not intended for use by anyone who would not benefit from the discipline and training that would be required to master it. Some steps in the process of becoming a professional CAD designer include: Understand the concepts of CAD; Perform complex and often tedious drawing tasks; Learn to learn from your errors; Choose the most appropriate software to use for the task at hand; Gain experience in the use of AutoCAD by completing basic and advanced training manuals and tutorials; Gain experience by practicing with the program; Study detailed manuals and work through the software help files to learn the latest features; Take refresher courses or courses that help with the enhancement of your skills and abilities; Attend classes that may be offered in your area, or consider attending one of the many training conferences available; Discuss CAD with other CAD professionals; Exchange information and ideas by attending and presenting at a CAD conference; Become familiar with the many solutions offered to the various CAD problems and use these solutions; Purchase AutoCAD training products and manuals; Read the available technical documentation; Read other CAD-related documentation; Read and learn how to use other CAD programs; Visit www.autodesk.com for additional information about AutoCAD. Q: Find the characteristic polynomial of A . Let A be the operator $A: \ell^2 \rightarrow \ell^2$ defined by $Ax = x_1 + ix_2$ for all $x = (x_1, x_2) \in \ell^2$. Find the characteristic polynomial of A . Is A diagonalizable? I have verified that A is self adjoint. I also know that the set $\{e^{ik} : k \in \mathbb{Z}\}$ is an orthonormal basis for ℓ^2 . I don't think that this is relevant to the problem, but I think it might help. A: Hint: A is diagonalizable, since it is selfadjoint. Moreover, as $A^2 = I$, it is the only possible eigenvalue, and all eigenvalues are real. Then, from the fact that the set of eigenvalues is real, one can easily see that the only possibility is $\lambda^2 - 1 = 0$.
