Change Video Dimensions Software

Change Video Dimensions Software is a straightforward program that keeps things as simple as possible. It is an easy-to-use video resizer that supports a number of popular file formats, and it can process your clips in no time at all, but it does not allow you to customize the encoding parameters. Novice-friendly video resizer that supports batch processing If you have no prior experience with video editors, there is no reason to worry, as Change Video Dimensions Software only requires you to import your files and define their new dimensions. No advanced configurations are necessary, and it is possible to process multiple videos at once. Additionally, the program offers support for drag and drop, and an entire folder can be imported at once to avoid having to load files one by one. Simple to use, but lacks advanced features While many users are likely to appreciate the application's straightforward design, it is worth noting that, other than selecting the resolution, the output settings cannot be customized in any way. The source format is maintained, but you cannot specify which codec should be used, alter the video bitrate or frame rate and change any audio settings. Naturally, experienced users are probably not going to be satisfied with these limited customization options. Simplistic user interface that fails to impress Change Video Dimensions Software would certainly benefit from a modernized GUI, as the application looks very outdated. On the positive side, its layout is fairly self-explanatory, so first-time users should not require any instructions to get the hang of things. What's New: This release comes with a couple of changes and features. First of all, a new UX mode of operation was introduced: it is now possible to use CVD in full screen mode. This can be done by hitting "F" key. It was also decided to add a screen recording mode (to be used by video editors) and the ability to change the audio channels and adjust their volume independently from the video channels. Additionally, this release also comes with a new option that allows to change the output resolution for each clip. Enjoy View Latest Version Do you need to change the output resolution of your files?
