In a time of geopolitical tension, many journalists have been following the fortunes of 'Canada's OAS,' the Global Affairs department's YouTube channel. Since it was launched in 2016, the OAS has been released at least once a week, offering the basics of the relationship between Canada and the other "Five Eyes" partners: the United States, Britain, Australia, and New Zealand. Every Tuesday, a new OAS video is released to accompany the regular updates of the Canadian Department of Foreign Affairs and International Trade. However, the new format of the OAS hasn't been well received by the media. Of the 39 current OAS videos, about half have been rejected. All the rejected videos include the term "Five Eyes" in the title, so most were taken down because they were perceived to be "Five Eyes propaganda." But at least seven videos have not been rejected, according to the ADMFIT's archived version of the OAS videos on their YouTube channel. They were uploaded to YouTube in the last two months, and all still remain online, although some are set to private. Here is a full list of the seven OAS videos still available: 1. "Canada's OAS: 25 years of Security and Prosperity Partnership" (October 23, 2018) 2. "Canada's OAS: A Bridge Between the 5 Eyes" (November 20, 2018) 3. "Canada's OAS: New Era of Cooperation" (December 3, 2018)

Since PSPs started out with Windows and now are really more like Windows laptops with a few of the staples of a handheld thrown in, there's no reason to not integrate your PC and PSP. PSPWare is that extra software you'll need to get your PSP working like a normal Windows laptop. It's for the most part completely free and easy to use. It's not intended as a replacement for SyncToy - PSPWare is for the most part a more powerful SyncToy on steroids, since it syncs your media and files with your PSP. SyncToy, on the other hand, is meant for synchronizing your songs to an iPod, thus it works more towards that end. SyncToy is also MUCH more limited in what it can do. If you're looking for something simple to use, just get SyncToy. It does an amazing job with the iPod, the camera, and many other storage devices. If you're looking for something powerful, SyncToy can handle it too. A Sony PSP is basically a Sony Windows Laptop, and hence it's not too hard to imagine that you might want to synch your PSP with your PC. But the solution that many PSP owners end up using is "iTunes" - and that's not a very good solution. But there are other ways of accomplishing the task, and PSPWare is one of those. Sync with iTunes "iTunes" is a portable music player, and it has a nice sync feature with your computer. You can either sync a
