Tag-pics.Anchor & Brakes Anchor & Brakes Using 4mm anchors is the most economical method, but it's still twice the price of 2mm. The 4mm prongs usually require the use of a large shackle, or heavy tree straps to attach them to the tree, and you may need several sets. Sliding a 2mm anchor into position can be done with small diameter materials like twigs, but the standard 2mm capacity pick or chain hook can be used to attach the anchor to the tree. This method is quicker, more economic, and is the one recommended for first time tree climbers. We usually recommend that you replace the 2mm anchors every two years, but it would also be wise to inspect your tree before every outing and replace any damaged ones. Our tree-fixed anchor kit is the most economical and versatile of all options. Using standard 4mm line, we attach a natural rubber bung, bearing, and drive pin to the lower end of the line. This does not include the purchase of any line, which we recommend is attached to the tree with a small diameter knot. The bung, bearing, and drive pin can be removed, repositioned, and reused, so you do not have to purchase all new or replacement line each trip. The disadvantage to the tree-fixed anchor is that they must be constructed in advance, as they are time consuming to set-up. As of now, they are the most expensive option. The tree-fixed anchor is especially effective for off trail travel, as it provides limited motion on the line. It can e24f408de9
