Sixtessure is a multi-thread, mini bench tool that employs math, graphics, threads, DirectX, 8 cores, 16 thread, 2D code, and 16 windows screen code. On top of that, Sixtessure is recommended to users who have the latest generations of CPUs, like 9th gen or 10th gen intel chips. Otherwise, their PC will experience some blocking issues. At least that is what the developer stated. How it behaves: Upon launching the application, twelve little benchmark screens will pop up, all with the same screen themes. After several seconds, the windows will disappear, allowing for the final score to be displayed.

No matter how many tests you run, the end score appears to be the same. Sixtessure is also a great way to benchmark CPUs for any machine you want, as it can be run without installing it. Just move it to a flash drive and run it on any PC you can get your hands on. To Sum things up: Sixxtessure is a benchmark tool that targets CPUs only. It is recommended to run it with high-end processors like (Intel) 9th or 10th generation models, but you may try it on 7th or 8th gen too. One downside to this app would be the scoring system min/max values, which are not specified anywhere. What do you think? Would you give Sixxtessure a go? If so, what do you think of its scoring? Based on our original report, Nitronic Labs has patched Starnado for its recently released VR game, Star Trek: Bridge Crew. As part of the patch, a few of the following issues have been fixed:

1. The game now has a new menu if you don't have a controller plugged into your Steam VR headset.
2. You can now press B to reduce the

thrusters and steer, instead of having to use the controller. 3. The recent patch for the game also applied a few fixes for the game's
