the real world? Sometimes the only way to know for sure is to deploy it into a real-world environment and make sure that it works as expected. During the development process, it is easy to overlook small details like memory usage, CPU usage, and other factors that could potentially limit performance. syringes are used for various

infusion procedures, as well as for drawing bodily fluids such as blood and lymph. The infusion procedures are performed with a single channel syringe. Generally, the syringes have two chambers, namely, a barrel and a plunger, as well as a hypodermic needle. In the prior art, the plunger is typically removable and is attached to the barrel. The needle assembly is threaded into the barrel of the syringe. In the prior art, it is known to provide a syringe having one or more

replaceable needles. Generally, the hypodermic needle is threaded into the barrel and the needle cover is threaded onto the hypodermic needle. The needle cover has a needle protection means which prevents accidental contact with the needle. The needle cover is replaceable so that a new needle cover may be provided after each use of the syringe. However, the needle cover does not prevent reuse of the syringe. That is, the needle cover is typically simply replaced

with another needle cover. Thus, reuse of the syringe presents a health risk. A single channel syringe is used for various infusion procedures. Typically, the syringe includes a barrel that contains a fixed dose of a pharmaceutical material. The syringe also includes a plunger that is movable within the barrel. The syringe barrel has a distal or forward end and a proximal or rearward end. The proximal end of the syringe barrel is configured for removably receiving the distal

end of the syringe barrel. In the prior art, the proximal end of the syringe barrel includes a needle chamber and a plunger chamber. The needle chamber is defined by an internal surface and an exterior surface. The interior surface includes a needle opening, and the exterior surface includes a rim
