Developer: Space City Adobe User Group  
License: Freeware  
System Requirements:  
• Adobe AIR (www.adobe.com/products/air)  
• Supports all the mobile platforms supported by Adobe AIR, and most other platforms.  
Would you like to give feedback on product content, images, or tell us about a lower price? Was this review helpful? Great Stuff! (4.5) 5  
Stephen Oliver I love this application. Having my own blog, I needed a great way to launch my content to my desktop. This does it all, and makes it easy to do. I have uploaded my full list of the sites that this software launches to. Go check it out! Add Your Comments Please make it easy for our community to keep tabs on what's going on. The more feedback we get on an application, the more we'll know about what works and what doesn't. Use the comments below to tell us about your experiences with this software. What's New in the?

The LaunchPad application is a lightweight audio control application that lets you control the playback of multiple audio files from a remote location. The application provides a full featured implementation of the XBee RF technology. The LaunchPad application is designed to work with a base station that allows you to control multiple instruments and multiple audio files. The application allows you to create instruments that can be mapped to individual audio files or to a section of an audio file and to create trigger events that can be mapped to individual audio files. LaunchPad Features: Mapped Control LaunchPad allows you to create various types of control modules. By mapping the control module to an audio file the module will be triggered when the audio file starts playing. A list of available audio files can be found in the application. When using multiple LaunchPad instances the audio file can be selected by the current instance. When using multiple LaunchPad instances the audio file can be selected by the currently active module. Mapping an audio file to a module will make the module control the audio file. The module will trigger when the audio file starts playing. Mapping an audio file to a module will make the module control the audio file. The module will trigger when the audio file ends. Trigger Events LaunchPad supports the usage of trigger events which can be mapped to an audio file. The event can be used to notify the application or a remote system of changes to an audio file. A list of events that can be mapped to an audio file can be found in the application. Audio File to XBee Control Module When mapping a module to an audio file you can use the module's sequence to trigger the module when the audio file starts playing. When a module is triggered it will send a sequence (SEND SEQ) to the LaunchPad server. The LaunchPad server is always listening for a SEND SEQ sequence. When a SEND SEQ sequence is received by the LaunchPad server the application will be notified of the trigger event. When a module is triggered it will send a sequence (SEND SEQ) to the LaunchPad server. The LaunchPad server is always listening for a SEND SEQ sequence. When a SEND SEQ sequence is received by the LaunchPad server the application will be notified of the trigger event. When a module is triggered it will send a sequence (SEND SEQ) to the LaunchPad server. The LaunchPad server is always listening for a SEND SEQ sequence. When a SEND SEQ sequence is received by the LaunchPad server the application will be notified of the trigger event. When a module is triggered it will send a sequence (SEND SEQ) to the LaunchPad server. The LaunchPad server is always listening for a SEND SEQ sequence. When a SEND SEQ sequence is received by the LaunchPad server the application will be notified of the trigger event. When a module is triggered it will send a sequence (SEND SEQ) to the LaunchPad server. The LaunchPad server is always listening for a SEND SEQ sequence. When a SEND SEQ sequence is received by the LaunchPad server the application will be notified of the trigger event.
