“dynamic action RPG - The Lands Between” “It’s been a long time since I played an RPG that didn’t have any sort of convoluted story but was filled with easy to digest and mostly upbeat battles. The Lands Between does this with a story that is funny yet dark, and a battle system that is simple and just plain fun.” “The main character is pretty likeable - the story is good, battles are incredibly easy to understand and the open world is great.” “The battle system of The Lands Between is a refreshing change in the genre. It has a simple and straightforward feel, with its emphasis on taking in the action and not the story. The dungeons are really addicting, and the RPG elements, in a way, are really fun. It’s perfect in how it presents itself.” The game is now available for purchase for 99 cents on the App Store and Google Play for iOS and Android platforms, respectively. The development of robust protein identification and analysis tools for proteomics will be crucial to accomplishing this goal. Most current techniques in proteomics are focused on proteins that are intrinsically labeled (such as by incorporation of radioactive isotopes or functional tags), or are selectively enriched using fractionation techniques. For the latter, it is important to have a standard protein-identification tool that can identify proteins for further analysis. To this end, we propose to develop software tools that are specifically designed for the identification of proteins after mass spectrometric analysis. These tools will be based on a library of 12,960 theoretical peptides that have been synthesized as a part of the human sequencing project. The main software tools will be: 1) an automated database search strategy, 2) a software plugin for peptide fragmentation analysis, and 3) a program to select peptides for tandem mass spectrometry for protein identification. bff6bb2d33
