All the dust for the world of fantasy gaming has settled and the only RPG games that define the genre with it are the Final Fantasy and Dragon Quest series. The time of emergence is now. Elden Ring is such a game that when you start playing it you instantly feel nostalgic for the time when games like Final Fantasy and Dragon Quest were born. Gameplay Elden Ring is an easy RPG game. Compared to other games, though, there are many things that are hard to understand. One of the most important things is the exchange system. As you have guessed, it is an RPG game and to attain additional EXP, equipping a new weapon or armor is a must. This system is very smartly designed. It begins when you get a new weapon, and you equip it. Your weapon turns red, and when you equip it, it turns green. It's very simple but you can actually use it in battle. It does not look good though. When you get a new armor, your armor changes color and you equip it. The screen scrolls to the right as you equip. It looks good. For the weapons you use when you get upgrades, the same process happens. If you equip a new weapon or armor, the game shows you the amount of EXP you will get. If you get a ton of EXP, your weapon will become red. If you get 1/2 EXP, your weapon becomes green. It's very easy to understand. The job system is similar. You can create 3 job levels, and each job level is very easy to understand. At the time of development, there were a lot of game titles out there that also had job leveling systems. The system was even included in Final Fantasy XIII: Lightning Returns, a game title that was released in Japan a month after Elden Ring was released. There are a lot of good systems in Elden Ring. As a matter of fact, the game is very unique, and it has a lot to offer. The graphics are also very good. Compared to other games, the graphics in Elden Ring are very good. All the characters have very interesting expressions. The characters' clothing is very cool, and they look very realistic. As for the armor that the characters wear, it is very cool as well. Also, monsters in the world look really good as well. The best part of the graphics is that every time a different map is selected, the graphics are different. This creates bff6bb2d33

For What Are We Fighting? The game's main story line in Celenia revolves around the question of what the two sides, the Dark Elven inhabitants and the Light Elven inhabitants are fighting for. The story is based on the myth of the Elden Ring and mainly tells the story of the brave but flawed Greed Elf. The story weaves

between the current living reality in Celenia and the past events of the Elden Ring, and deals with a number of broad themes such as love, greed, curiosity, the need for balance, and the need to choose the right path. * During the course of the game, you can choose from three choices: Magic, Combat and Charisma. Each choice will award you a Skill Point to use at a later point in the game and grant you the corresponding Skill. * Each Skill is considered to be one of the four basic elements: Earth, Ice, Fire, and Earth. Earth is the Skill that requires less Stamina to use than other Skills. For example, the Earth element Skill of "Riding" is considered to be less Stamina-intensive than the Fire element Skill "Illumination".

1. Field of the Invention The present invention relates to an improvement in a resonant reaction force generator which is applied to automobiles. **2. Description of the Prior Art** The resonant reaction force generator which has been proposed for the purpose of improving the ride of a vehicle and absorbing the shock applied to the body of the vehicle from the road surface is adapted to absorb the shock by giving a driving force to the wheels through the action of a prime mover such as the engine, and by generating a secondary reaction force corresponding to the driving force so as to resonate with the oscillation of the wheel or wheels to provide a driving force to the vehicle's body. Such a resonant reaction force generator has, for example, a speed ratio varying device which can change the speed ratio by a predetermined degree and a constant speed control device which can set the speed ratio of the speed ratio varying

device at a constant value. For example, the speed ratio varying device has a variable speed ratio part which serves to reduce the speed ratio and a constant speed ratio part which serves to increase the speed ratio. A sensor is provided for detecting the speed ratio set by the constant speed control device and the speed ratio of the variable speed ratio part is corrected on the basis of the speed ratio set by the constant speed control device through the use of the output of the sensor, so as to regulate the speed ratio of the variable speed ratio part to the constant value. The constant speed control device has a constant speed control part which serves to make the speed ratio of the variable speed ratio part constant. The constant speed control part provides a feedback control to change the speed ratio of the variable speed ratio part to the constant value. The feedback control in the constant speed control part has a proportional characteristic and an integral characteristic, and the proportional characteristic has a time constant. The conventional speed ratio varying device which is generally used operates to vary the speed ratio with a predetermined time constant. In order to maintain the speed ratio when the oscillation of the vehicle is changed, the frequency of the oscillation is detected to raise or lower the speed ratio so as to change the speed ratio in accordance with the oscillation frequency. However, the detection of the oscillation frequency is dependent upon the factor such as the number of revolutions of the engine. Therefore, the detection of the oscillation frequency is very difficult when the oscillation frequency is changed greatly or when the engine of the vehicle stops. In addition, the magnitude of the oscillation frequency is not always constant because the oscillation of the vehicle
