DaisyDisk, although it is fairly light on features, is a solid file management and partitioning utility. With a clean, simple and intuitive interface, users will be able to manage the available storage space on their Windows PC without facing any problems. Features Low-level disk information, such as the available disk space, available partitions, available disks, are viewable using the built-in tooltip. The date of last backup, as well as the time of the last backup are also viewable, as a standard tooltip. Disk information can be exported to CSV files in plain text format. The program comes with direct access

to command prompt and command prompt line in DOS-style. User-friendly sharing features are included in the application and basic options include sending files via E-Mail. Other options include FTP, SFTP, WebDAV, FTP/FTP, and FTP/SFTP. The tool is a powerful utility when it comes to data recovery. DaisyDisk comes with the ability to control the system of the target computer. Multiple boot device choices are available to customers. Backup can be done both in full and incremental methods. DaisyDisk does not come with a built-in file explorer, so you have to add one of your own. Installation DaisyDisk can be easily installed on a removable drive, which does not require physical installation. Of course, the required physical installation on the target computer is recommended to be done by means of a backup, as failure to do so might lead to unexpected errors. Main screen interface DaisyDisk is a Windows application, so it has a Windows Explorer-like interface. It includes a toolbar with five buttons: File, Edit, View, Exit, and Select. You can add up to three targets to the application, which are comprised of the following: The first and the last one define disks on the target computer. The middle one defines the partition. You should make sure that the target disk is located in one of the available drives. After you click the Select target button, a target window with a few fields is opened, which includes:

ID of selected target Disk number Name of selected target Drive of selected target All information is shown in the main window with the help of the tooltips, which pop up when you hover on a specific field. Depending on the field, relevant commands can be run, with buttons which appear on the toolbar. Saving

Upon loading the software the user is presented with a simple, easy to navigate interface with a set of 3 nice graphics to choose from as well as a list of default startup options. After selecting a theme from the list, the user is then allowed to customize the screensaver by adjusting a number of basic settings on the "Screensaver Settings" tab. Here the user is allowed to: Select the type of screen motion Select a background image Adjust the screen transition settings Select the duration of the screensaver To make a picture blend in, the user can try using screen blurring filters. From the menu options that can be selected the user can "Start" or "Cancel" the screensaver. If they choose to "Start" the screensaver, a timer will automatically start, beginning when the user presses "Start" and ending after the selected amount of time. If they select the "Cancel" option, then they are not prompted to start the timer as the screensaver will simply be "paused" and will resume when the user moves their cursor back to the computer. After selecting "Start" or "Cancel" the user may select their "Delay" option from the timers section of the "Screensaver Settings" tab. This is the option which will be responsible for actually bringing the images

together to form the screensaver. The user can select from a list of images, all of which are drawn using the same style as the ones on the "Picture Settings" tab. The images are ordered by the length of their "Delay" and "Extend" values. This will help the user determine the best images to draw from their list of default choices. After selecting an image to use in the slideshow the user can choose from a list of settings from the "Picture Settings" tab. These settings allow the user to: Set "Delay" Set "Extend" Set "Blending" Set "Transparency" The "Blending" option can be toggled on and off as well as set to either be "Normal", "Gradient", or "Anim" which will cause the image to gradually change over the defined period of "Delay". The "Transparency" option can be toggled on and off as well as set to either be "Normal", "Gradient", "Black", "White", "Cyan", "Magenta", or "Yellow" which will cause the image to automatically
