[Image credit: Adobe (WWW.ADOBE.COM)] Adobe's Photoshop is one of the most popular desktop image editing programs, and boasts more than a million registered users. So, what does it take to be one of these Photoshop users? Here are eight things beginners can learn to become Photoshop power users. 1. Basic Skills Learning to use Photoshop is not as complicated as some people make it out to be. If you have a basic knowledge of Windows and a basic understanding of image editing, you can get started on Adobe's Photoshop. Here's a general overview of the interface for Photoshop, if you need a refresher: [Image credit: Google Image Search] Advertisement: 2. Open and Save If you've ever used any image editing program you've undoubtedly used the save dialog. It's used to save a photo, upload it to a website or just move an image to another folder. The save dialog is a combination of a save file and a folder selector. In Photoshop, it's found by opening File > Save As or pressing Ctrl-S. This will bring up a box of preset names you can choose from, along with some other options. [Image credit: Google Image Search] This example is set to save in a new location with the "new document" type of file that can be opened in Photoshop. A new file will also be saved with a default document name in the name of "new.jpg." [Image credit: Google Image Search] Depending on your settings, you may have the ability to select the format. This is the description that can be found in the format pull-down menu. There are three types of file formats available in the menu: TIFF, Photoshop (.psd), and raw. The description of the.psd format is that it is an Adobe Photoshop file that lets you edit layers as well as expose and color controls. 3. Background The background portion of a photo is the place where the photo is actually taken. A photo is a flat square array of pixels, but most people want to add color and depth to it. The background portion of your image will help to bring out colors as well as add focus to a subject. In Photoshop, the background can be changed to the "default" color or to a different color. You can set the background color from

In this article we'll show how to use layers, the crop tool, masking, flattening and editing selections. At the beginning of the article we'll show how to open and edit an image and then afterwards we'll move on to specific sections to give you more details. Step #1: Open and Edit the Image The first step of editing an image is to open it in Photoshop Elements. We'll do that in the File > Open dialog. Press the Ctrl + O key combination to open the Open dialog. In the Open dialog, select the "Images and Images in Organizer" tab. Make sure that the "PNG, TIFF, JPG, GIF and so on" button is selected to open the file for Photoshop Elements. After you open the file, press the Ctrl + U key combination to enter the edit mode. Step #2: Layer Managament and the Crop Tool Before we start working on the image, let's create a new layer. The first layer we create is going to be our background. We use the Background layer to make our image fit to a certain size. Since we will edit this layer later, we'll make it into a mask in order to control where the new image is being placed. To create a new layer, click the Layers button on the top right of the Layers panel. Click the New Layer button on the bottom right of the Layers panel. This creates a new layer for us. Turn off the Background layer. To do this, select the Background layer and press the X key on your keyboard. Add a new layer (above the Background layer) and then we will move the image down so that it partially covers the new Background layer. Use the Move tool to move the image. For this step it doesn't matter where the image is so press the Ctrl key to move the image to the position where you want it to be. Use the move tool (the green arrow) to drag the image a few pixels down. Once the image is moved, release the mouse button. It should look like this: In order to move the image down, so it is partially on the new layer, double-click the new layer. Step #3: Setting the 05a79cecff

Q: How to fill a 3D-array with pixel-values using MATLAB? EDIT: I followed the suggestions of @Mad Physicist. However, when I declare an array with A = [100 200 300] and then check its 3D structure by using size(A) I get ans = 3 2 2 as expected. However, when I try to fill an array like this B = uint8([100 200 300]) where the value of B is the value of the pixels in A, I get ans = 1 0 0 as if the size of B were 1×1×1, instead of 3×3×3, and this is not as expected. How to fix this? Original question This is the picture I'm trying to fill: As you can see, the position of the pixels in the square is not the same in each corner, but I want the array to look as in the second picture. What is the problem here? A: You're array is not stored in the usual format. it is stored as 2-dimensional array like this. If you inspect the size of your array, it is not size(3) and that's why it is not storing all the data in 3x3x3 array. Or If you inspect the size of the array by using size(A), it is size(1) that is why this is happening. You need to modify your code as : A = [100 200 300] B = uint8([A]) disp(size(B)) ans = 3 3 3 Q: Convert date datetime in another date datetime I have datetime with an format 2020-01-01T23:00:00Z and I'm trying to convert it to another date datetime. My problem is that when I try to convert it it shows 'Error while parsing date'. Tried: DateTime.ParseExact(string, "yyyy-MM-dd'T'HH:mm:ss'Z'", null)

Jōmō-ji Jōmō-ji is the title of a Shingon Buddhist temple and a sub-temple complex in the Shirakawa-gogo neighborhood in the city of Kyoto, Japan. Jōmō-ji is one of the few temples where a Buddha said to have attained Nirvana by the power of Amitābha (Sanskrit: Amoghasiddhi) after the death of Siddhartha Gautama, the historical Buddha, still remain there. Jōmō-ji is part of the Keifuku Jūkan-ji network of temples. Keifuku Jūkan-ji is a network of temples managed by the Keifuku Jūkanji Hongwanji (Keifuku Hongwanji of Kyoto). Keifuku Jūkan-ji was established in 1952 and there are Keifuku Jūkanji temples in various countries including Great Britain, Switzerland, France, Germany, Luxembourg, Spain, Italy, Japan, the United States, Indonesia, India, Sri Lanka and the Philippines. History The oldest parts of the Jōmō-ji temple was built in 1649, and the Buddhist buildings were destroyed by fire in 1863. The present main hall was constructed in 1896. The monastery was founded in 1271, and remained under the direct control of the Hongan-ji. After the Meiji Restoration, it was separated from the Shingon sect and became a part of the Keifuku Jūkan-ji.
