This LANmonitoringSoftware is actually an employee monitoring software.. The system will be even smaller with different LED diodes, different color LEDs, and other minor improvements. Q: Best way to retrieve data from DB with multiple rows I'm writing a batch file to retrieve some data from a DB. Some of the returned rows may be related, so I need to use a relational operator. I don't know exactly how many rows I will get, but it should be a small number. My initial thought was to do something like this: SELECT ID , someValue1 , someValue2 FROM myTable WHERE someValue3 = (SELECT someValue3 FROM myTable WHERE myOtherValue = 2) But I thought that would result in a lot of subqueries. I'm hoping there's a better way. (Using SQLite for the DB) My second thought was to have one database record for each unique ID and then just look up the other values from there, but I was under the impression that this was not a good way to structure a DB. A: Use a JOIN. This way the subquery will be executed for each row returned from the join. If the subquery returns 0 rows, the join will return 0 rows. SELECT a.ID , a.someValue1 , a.someValue2 , b.someValue3 FROM myTable a INNER JOIN myTable b ON b.myOtherValue = 2 WHERE a.someValue3 = b.someValue3 Book Hotel

While not the simplest text editor I've used, it's free and it works. You really only need the text editor portion of the editor, and it does everything I want. Actually, when I use it, most of the text editing I need to do isn't really text editing at all, but rather command line typing. I'm too cheap to pay \$30 for an editor that does nothing but text editing. I think the trouble people have with it is that they expect too much from it. Imagine that. An editor so amazingly awesome that people actually think it's not awesome enough. And imagine the outcry when your editor is available for only one platform. Anyhow, I have to commend the developers of Notepad++ for coming up with an editor that does what I need it to do, and even go beyond that, but despite all that, I can't say that I don't want it. In fact, I have two accounts. On my main one, I use it as my standard text editor, and I suspect that will continue. On my second account, I use it as a version control system in a little project of mine. This gives me the ability to look at what's in my editor when I want, and it doesn't let me screw things up like a text editor would. One word of warning, though, before you try this. It's a little bit slow. It also has issues with various features. When I use the text substitution feature, it sometimes get's overwritten when I paste something. And my code doesn't like auto closing. You can download it here. It's a Windows only editor, but has Mac OS compatibility. The options are easily accessible and intuitive. Notepad++ is available for free download from the developer's website. Sharing your scoops to your social media accounts is a must to distribute your curated content. Not only will it drive traffic and leads through your content, but it will help show your expertise with your followers. Integrating your curated content to your website or blog will allow you to increase your website visitors' engagement, boost SEO and acquire new visitors. By redirecting your social media traffic to your website, Scoop.it will also help you generate more qualified traffic and leads from your curation work. Distributing your curated content through a newsletter is a great way to nurture and engage your email subscribers will developing your traffic and visibility.
