Ultratools Editor For Windows [Updated]

Note-based arrangement program for creating original songs and for editing existing ones. Three types of notes, complete with their corresponding lyrics The software allows users to work with standard, freestyle and gold notes. These are added by using the top buttons. A nice feature is that notes can be merged and split. Another interesting function is that users can insert the lyrics while working on the song notes. Each note receives its very own lyric; This is where the split and merge notes functions really pay off! Users can personalize their file by filling in many metadata fields (like author, genre, year of production and Bpm). Songs are saved in standard TXT format, which makes it very easy to transfer them around. A clean and bilingual interface The interface is well suited for the job at hand. The bottom part of the main window is occupied by the actual work area. This is where notes will be added or removed. The three types of notes available to users are displayed using their respective colors, which makes it very easy to spot errors. An interesting feature, although probably unintended, is that a few French phrases seem to have ended up in the main window, alongside their more common English counterparts. This will surely be fixed in future versions. A very simple, easy to use and practical resource 4.95 USD Overview Ultratools Editor is meant to aid users in creating their very own Ultrastar songs, complete with note-by-note lyrics. Report view abusive videos Barbara Prince Posted September 13, 2013 I love this movie, but I would like to have some more diferent sound effects and more melodic music in the background of it. At least their should be a better melodic theme and one with much better sound and music. I really like the sounds here. It was really a nice theme song. I would recommend it to others. I didn't realize it was a tribute until after I heard the sound track. It was actually a wonderful song, but I would like to have heard a little more music in the background. The sounds of the outro of the song where wonderful. 1 vote Report view abusive videos These plugins are free
