Field of the Invention The invention relates generally to transistors for a high voltage use and, more particularly, to high voltage metal oxide semiconductor transistors for use with a plurality of high voltages. 2. Related Art Electrical power (electricity) is either delivered to or removed from a

load or loads. A load may be a power supply or a load. Power supplies, such as battery packs for mobile devices, including cell phones, laptop computers, personal digital assistants (PDAs), and tablets, are used to power the load, usually by drawing current from a power supply, which may be DC or AC. Loads may also be motors, light bulbs, electrical machines, steam valves, and other loads. Examples of loads may include computers, toasters, compact discs, door locks, light bulbs, and the like. More specifically, an input power supply may be DC and deliver a constant level of DC voltage, while a load may be an AC motor, which requires a constantly changing level of voltage and current (AC current). Thus, the output power supply for the load must be of an alternating voltage and current. The output power supply may be a DC/AC converter that converts the DC power supply to AC power and delivers the AC power to the load. The load may comprise an AC motor, which may be rotating or non-rotating. In addition to AC motor loads, loads may be AC power sources or "rectifiers," which convert AC voltage to DC voltage and supplies the DC voltage to a DC power supply. Rectifiers can include one or more diodes, or other devices or components, configured to convert AC voltage to DC voltage. Therefore, when the load is an AC motor, a power supply, or a rectifier, the power supply may deliver a constant voltage or current to the load. When a single power supply is connected to an AC load, such as an AC motor, the power supply may be arranged to provide the power to the load by selecting one of a plurality of predetermined voltages depending on the specific use. For example, a power supply may be arranged to provide the power from the AC power supply to the AC load by selecting one of a plurality of predetermined b7e8fdf5c8
