Selective Color—or Color Dodge—allows you to easily change the color of only a portion of an image. You can do this using a brush, or you can erase parts of the image and paint over them with a different color. The Pen tool is a smart bitmap selection tool that lets you select only parts of an image that are within certain constraints, such as a circle or rectangle. Using it, you can highlight an area of an

image or select a specific part. The Curves and Levels dialog box is where you can make some changes to the brightness, contrast, and color of your images. The Lasso tool lets you click and drag to select portions of an image. You can then paint the parts of the image that you want to fill, adjust the size of the selection, or change the shape of the selection. The Magic Wand tool allows you to choose a specific area of the image. The tool then changes the foreground color to match the

background color in the selected area. Rotoscoping is a technique used to create stop-motion animations of a person's face or other repetitive actions. A Dof (defocus) adjustment tool, which lets you change the focus of an image. You can use it to make an image more in focus, or less in focus, depending on your needs. Layers enable you to work on a number of things at once without having to apply each effect to each layer. The Pencil tool allows you to draw and erase directly onto an image. Most Photoshop brushes are Photoshop AI (Artistic) brushes, and while Artistic brushes are typically good for artistic purposes, they are quite limited and it can take a lot of

practice and experimentation to get good results. If you don't have a set of pre-created brushes that you are familiar with, it can be a real pain to start creating your own. This is where Photoshop brush presets come in. Brush presets are pre-made brush sets that you can access in Photoshop. They come in two varieties: Presets that just add one or two brushes to the standard brush set are called Photoshop brush presets. Brushes that are pre-created with additional tools are called Photoshop

brush libraries. In this tutorial we'll show you how to create your own Photoshop brush presets. First we'll look at the steps involved in creating a brush preset, and then we'll use a pre-existing brush to show you how to use the brushes you've created. Step 1: Create a Brush Preset In order to save your brush in Photoshop as a preset, you have to create a new brush. You can do this in two different ways: Click the Brushes tab in the Photoshop preferences dialog, and choose New

Brush. Or choose File > New and choose a preset from the Presets sub-menu in the Brush panel. The Brush panel will open and you can start creating the brush. You can either create a preset from an existing brush, or you can start with a new one. Either way will work. Step 2: Create the Brush You can create a brush preset with only one type of brush. For example, if you want to create a brush that's similar to a paintbrush brush, you can have it create a new layer style, or you could

use a paint brush that creates an existing layer style. In this example we'll make a preset using the Photoshop Spatter brush, which creates a grunge-like texture. Click the Brush tool in the Tools panel and drag across a photo. When you stop dragging, the brush
