Steps: Capturing Photoshop is great for creating multiple images. It can capture a still image and, if you're so inclined, add some movin' and shakin' to capture video. The easiest way to do this is to use the Photo Stamp tool, which lets you pick up a particular spot on the canvas in an image and copy it onto the new image. The Photo Stamp tool Image: Lightbox by Lightbox is a fantastic site for learning and sharing images. Click here to see the "The Photo Stamp Tool" tutorial. Steps: Saving Picking up where we left off, the first step is to create a new document with a resolution of 300 pixels. The file size is going to be around 1.8 MB. File size is a determinant of file speed. So you might as well try to keep the file size to a minimum. In the new document, we're going to do a little bit of fiddling with the background so that you can better see what we're doing. We're going to want to clean the background up and get rid of any unwanted items that might show up. Here's a great image called Uncle Brown. I've cropped it down and taken away the stuff you don't need. Image: Uncle Brown by Dumb Bunny Studio Now we're going to make the background black. If you can't do this at 100% opacity, just make sure that it's at least 80%. Go to the top menu, and choose Fill & Stroke... Image: Fill & Stroke by Chris Hill Next we're going to make the image transparent. Choose the Fill tool and pick up the Background Color option. You should be presented with a color palette where you can pick one of the preset colors. Before we go any further, let's make sure that we're on the right page. Look on the bottom-left corner. If your version of Photoshop doesn't show it, there should be a little box with a number in it. So if you have the "Photoshop CC 2017" version, the number is 3. If you're running the previous version, the number is 4. In either case, press the 4 in the number to bring up a box that lists each Photoshop version. Press the 4 to go to Photoshop CC 2017. Now press the "for 1-10

◆exorbitant privilege” of the most toxic situations, and deflects our attention from the basis of the problem (the establishment of a violent, racist state) to the death of one individual. I want to close with an example that illustrates a different aspect of Bush’s thinking. On March 14, 2003, a secret memo written by Deputy Secretary of Defense Paul Wolfowitz and distributed to the White House was leaked to the press. The memo argued that Iraq’s president, Saddam Hussein, was intent on attacking the United States of America; that the United States was right to remove Saddam and replace him with a pro-U.S. government; and that the greatest threat to U.S. security was weapons of mass destruction and not al-Qaida. The memo — at least in its later, leaked form — was wrong on all three counts. Saddam, the memo argued, was a brutal dictator, not a terrorist; he was an ally of al-Qaida, not an enemy; and he had no weapons of mass destruction to threaten the United States. Nevertheless, the memo suggested that the White House didn’t actually care whether Saddam possessed WMD or al-Qaida did; that the terrorist threat was secondary; and that the real threat to the United States was Saddam’s autocratic regime. I would argue that this attitude, of regarding Iraq as an objective rather than a subject of humanity, is extremely dangerous. Rather than alienating the Iraqi people and thereby encouraging them to rise up against Saddam, it would make the situation in Iraq even more volatile. The same goes for the attitude of viewing ourselves as subjects of no interest to anyone but U.S. domestic politics. We cannot justify American military interventions on the grounds that we’re fighting for democracy or freedom, or that we’re doing so in the name of humanity, or in the name of the United Nations, or because it’s the “right thing” to do. I doubt that this is what Bush or Cheney were thinking when they decided to invade Iraq, but it surely influenced their decisions and their attitudes in the immediate aftermath of the attack. A.N. Creating an icon in Photoshop Step 1 A good icon is a combination of complex shapes, simple shapes, and basic colors. If you are designing your own icon for a logo, you should do some simple art studies first. Sketching from life and from your imagination should be your first tools. If you haven’t been sketching, then you should sit down and draw simple sketches or paintings to get ideas about shapes and colors. Sketching is a process that can continue for a long time, and can really help you get ideas. If you are not the best at art, get some tutorials and read about color theory. Step 2 Open your picture in Photoshop and create a new document. This will be your work file. Step 3 In Photoshop, choose the Rectangle tool. The brush will be a flat color. Create a rectangle that is large enough to hold all the elements of your design, and move the cursor to the corner of the rectangle. Click once, hold down the shift key and click again. Step 4 Press Alt + Ctrl and click on the design area you just created. Add more Rectangles to the design. Use different shapes and brush sizes and colors to create different areas in the design. Keep the brushes and the edges of the shapes clean and organized. Try to use a big brush for the major elements, and a small brush for details. You may want to create an outlined rectangle for the main graphic. Step 5 Once you get the basic shape of the design, add a pattern layer. Click on the Add Layer Mask icon and select the Brush tool from the patterns. Choose a soft brush and lightly sketch in the pattern over the design. This will help you match colors and will blend the background into the design. Make sure that you have a soft edge on the brush and that the size
